Subject: WTP bit feedback

I claimed the horse Mama Decides on December 6, 2012. Endoscopic exam showed that she displaced her pallet. I tried tying her tongue without much luck. She ran on January 6, 2013 with a tongue tie, beat two horses and was beaten twelve and a half lengths. She would not relax.

I ran her back on January 27, 2013 without a tongue tie but with a figure eight instead. She made no improvement and was beaten seventeen and a half lengths.

I then decided to give the WTP bit a try. She worked two times with the new bit and she showed improvement in her workouts. She ran on February 22, 2013 with the WTP bit and won by two lengths. This was the only change made. All races were for the same condition.

I strongly believe the WTP bit helped my filly improve greatly. I would highly recommend this bit to anyone with a horse that displaces.
